## EDUCATION

**B.Tech in Artificial Intelligence** — Vidya Jyothi Institute of Technology, Hyderabad  
CGPA: 8.59

2022 – 2026

## WORK EXPERIENCE

**AI & Automations Intern** — Tericsoft, Hyderabad

Feb 2026 – Present

- Developed AI-powered automation workflows and intelligent agent systems to support internal operations and client-facing products.
- Built and deployed agentic pipelines integrating LLMs, voice AI, and data platforms across multiple production projects.

## PROJECTS

**AI-Powered Engineering Team Analytics Platform**

Internship · Tericsoft

- Built a 4-model agentic pipeline** (LightRAG → Gemini 2.5 Flash → BigQuery → Mistral Large) that lets engineering managers **query live** team performance data across GitHub, Jira, and Keka HR from 35 BigQuery tables using plain English.
- Delivered an 11-chart productivity dashboard and freeform Natural Language → SQL chat interface, **eliminating hours of manual cross-platform reporting** and giving managers instant, accurate team insights on demand.

**Autonomous SEO Blog Research & Content Writing Pipeline**

Internship · Tericsoft

- Independently built** and shipped an **autonomous SEO content pipeline** actively used in production at Tericsoft.
- Workflow handles **live competitor scraping** (using DataForSEO API), **multi-model AI writing** (LLaMA 3.1 8B, GPT-4.1 mini, GPT-4.1), and publishable blog on tericsoft.com — reducing a **multi-hour manual process** to a **few minutes**.

**Doctor Appointment Booking AI Voice Agent with Real-Time Availability Check.**

ElevenLabs · Make.com · Cal.com

- Designed an ElevenLabs conversational voice agent** integrated with Cal.com via Make.com webhooks that **autonomously checks availability**, collects patient name, email, and phone, confirms details verbally, and books the appointment — all **without any human** on the clinic side.
- Showcased it with a **custom branded patient-facing frontend**, the system removed front-desk overhead entirely and made appointment booking **available 24/7 at zero operational cost** per booking.

**AI Outbound Call Agent for Dealership Post-Purchase Follow-Ups**

ElevenLabs · Twilio · Make.com

- Built a fully automated post-sale feedback system** where adding a customer row to Google Sheets **instantly triggers** a personalised outbound call via ElevenLabs and Twilio — addressing the customer by name, referencing their specific car and purchase date, and conducting a structured 3-question satisfaction survey conversationally.
- Eliminated all manual follow-up effort entirely**, with every call's transcript, AI-generated summary, duration, and recording URL automatically logged back to Sheets — **zero human involvement** after the sale.

**Thyroid Cancer Detection — Bilinear CNN**

Published Research Paper - ICICC-2025, Springer LNNS

- Built a system for Thyroid cancer detection - Dual VGG16 bilinear CNN** for TIRADS-based ultrasound nodule classification; XML-based ROI extraction and augmentation. **Published in Springer LNNS (ISSN 2367-3389).**

**Colour-Based Object Sorting Robotic Arm**

Arduino · Hardware

- Built an Arduino Uno system** using TCS3200 colour sensor, servo motors, and electromagnet for fully autonomous real-time colour detection and pick-and-place sorting — **no manual input required once calibrated.**

**Racing Simulator for Gaming Console**

Hardware · DIY

- Built a custom racing sim peripheral** on a repurposed gaming controller motherboard — handcrafted steering wheel with paddle shifters and potentiometer-based throttle/brake/clutch pedals; **plug-and-play with any console or PC.**

## SKILLS

**Programming Languages & Frameworks:** Python, Java, C, FastAPI, Streamlit

**LLM & Generative AI:** LangChain, LLM APIs (OpenAI, Gemini, Anthropic), RAG, LightRAG, FAISS, SentenceTransformers

**Agentic AI & Automation:** n8n, Make.com, Agentic Workflows, Claude Code, ElevenLabs Voice AI

**Data & Analytics:** MySQL, Google BigQuery, Power BI, Pandas, NumPy

## CERTIFICATIONS

- Acquired certifications in **Programming Essentials in Python** and **Programming Essentials in C** from **Cisco Networking Academy**, building strong foundations in programming concepts, data structures, memory management, and modular program design.
- Earned certifications in **AWS Academy GenAI Foundations & AWS Academy Machine Learning Foundations** and developing knowledge of Generative AI and core Machine Learning algorithms.

## LEADERSHIP

**CSI VJIT, Student Co-ordinator** — Organised Design-a-thon with 130+ participants; managed judges, participants, and event logistics. **Vritti Entrepreneurship Club, Core Member** — Organised startup workshops and guest speaker sessions at VJIT.
